## MACHINES FOR THE PRODUCTIONS OF **Sacred Host**

MACCHINE  
PER LA PRODUZIONE  
DI OSTIE SACRE

MACHINES  
FOR THE PRODUCTIONS  
OF SACRED HOST

MAQUINAS  
PARA LA PRODUCCION  
DE HOSTIAS SAGRADAS

To **produce hosts** for holy mass three machines are used, one for each production phase.

The first production phase is the **baking** of the host sheet. With **PRESS** models 104 and 2000, either single or double, an oval host sheet measuring 53 x 25 cms can be baked.

The second production phase is the **humidification** of the host sheet. With **STEAM CHAMBER** models 105/n and 105, the host sheets are humidified so they can be cut without breaking into small pieces.

The third production phase is the **cutting phase**. With **CUTTER** models 106 and 193, either small or large hosts can be cut as required.

All models have the following features in common:

**Electromechanical** parts: mean easy machine use and installation, no particular installation systems are necessary, just plug the machine into an electrical socket (previously fitted in the workplace) for machine operation;

- **Simplicity of use**: each machine is worked by electric push buttons and switches.

- **Reduced noise level**: mechanical and electrical working parts have been designed to keep noise to a minimum, especially in consideration of the type of environment where they are normally operated;

- **Reduced size**: means the machines can be installed in a room measuring 15 to 20 sq. mts.

*Automatic Mould Model*

• 2000 single and double

*Maxi Steam Cell*

• 105/n

*Sheet Cutter*

• 193
